FPR1 activators refer to compounds or substances that can activate FPR1 (Formyl Peptide Receptor 1, N-formyl peptide receptor 1). FPR1 is a G protein-coupled receptor that is widely present in various types of leukocytes. It can recognize and bind bacterial-derived N-formyl peptides and is involved in regulating biological processes such as inflammation, immunity, and cell migration. FPR1 activators promote the generation of relevant biological responses by binding to FPR1 and initiating its signal transduction pathway, and are used to study the role of FPR1 in physiological and pathological processes and the development of treatment strategies for related diseases.

The global FPR1 Activator market size is projected to grow from US\$ 70.1 million in 2024 to US\$ 123 million in 2030; it is expected to grow at a CAGR of 9.8% from 2024 to 2030.
