An FPV (First - Person - View) video transmitter is a crucial component in the realm of remote - controlled devices, particularly drones and radio - controlled vehicles. It is designed to send real - time video signals from the device's onboard camera to a receiver on the ground. The transmitter operates on specific frequencies, usually in the 5.8 GHz or 2.4 GHz bands, depending on the regulatory requirements and the intended use. For example, in drone racing, the FPV video transmitter allows the pilot to have a first - person view of the drone's flight path, as if they were actually on board. This provides an immersive experience and enables precise control during high - speed maneuvers. The quality of the transmitter affects the clarity and latency of the video feed. High - quality FPV video transmitters can provide a stable, high - resolution video stream with low latency, ensuring that the operator can respond quickly to the visual information received and make accurate decisions regarding the device's movement and actions.
