FR-4 copper clad laminated sheet is a composite material made by impregnating woven glass fiber fabric with epoxy resin and laminating copper foil on one or both sides. It offers excellent electrical insulation, mechanical strength, thermal resistance, and dimensional stability, making it the most widely used substrate material for printed circuit boards (PCBs). FR-4 strikes a balance between performance and cost and serves as a fundamental material in the electronics manufacturing industry.

Upstream of the FR-4 copper clad laminated sheet industry mainly includes glass fiber yarn and fabric, epoxy resin, curing agents, flame retardants, and electrolytic copper foil. The midstream consists of CCL manufacturers responsible for resin impregnation, lamination, and quality control. Downstream applications are concentrated in PCB manufacturing, ultimately serving end markets such as consumer electronics, communication equipment, automotive electronics, industrial control systems, and servers.
