The global FR-4 Rigid PCB market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

FR4, also written as FR-4, is both a name and a standard rating. The name is applied to the fiberglass-reinforced epoxy-laminated sheets used in printed circuit board manufacturing. Rigid Printed Circuit Board (RPCB), also known as a rigid PCB, serves as a foundation for electronic components. Constructed primarily from an insulating substrate such as fiberglass-reinforced epoxy resin, it features intricate circuit patterns etched or plated onto its surface with conductive materials like copper foil. These patterns facilitate the interconnection of electronic components, enabling the transmission of electronic signals and functional control within devices. Renowned for its structural rigidity, high temperature resistance, and chemical corrosion resistance, RPCB finds extensive application in electronics ranging from computers and communication equipment to industrial controls and consumer electronics.

United States market for FR-4 Rigid PCB is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
