The global Fracking Proppants market size is predicted to grow from US\$ 100240 million in 2025 to US\$ 169310 million in 2031; it is expected to grow at a CAGR of 9.1% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Some the driving factors of fracking proppants include:

1. Increasing demand for natural gas and oil: The global demand for natural gas and oil continues to rise, driving the need for increased exploration and production. Fracking proppants are essential in hydraulic fracturing operations, where they are used to prop open the fractures in the rock and allow the extraction of hydrocarbons.
2. Technological advancements in hydraulic fracturing: Advancements in hydraulic fracturing techniques, such as horizontal drilling and multi-stage fracturing, have led to increased efficiency and productivity of shale gas and oil wells. These techniques require larger quantities of fracking proppants to effectively stimulate the reservoirs.
3. Cost-effectiveness: Fracking proppants, such as sand and ceramic beads, are relatively cost-effective compared to other techniques used in oil and gas extraction. Their affordability and availability make them a preferred choice for hydraulic fracturing operations.
4. Environmental regulations: Fracking proppants have been considered as a potential alternative to other propping agents like silica sand, which can pose health and environmental risks if not properly managed. Proppants made from ceramics and resin-

coated sands offer a safer and more environmentally friendly option.

5. Market competition: With the growing demand for fracking proppants, there is a competitive market among suppliers. This competition drives innovation in proppant technology, such as the development of lightweight ceramic proppants that can withstand higher pressures and temperatures.
