The global Fractionator market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A Fractionator is a distillation tower used to separate a mixture of liquids with different boiling points into its individual components. These components are called fractions, hence the name. It works by exploiting the varying volatilities (boiling points) of the components in the mixture. More volatile components (lower boiling points) vaporize and rise in the tower, while less volatile components (higher boiling points) remain as liquid and travel down.

United States market for Fractionator is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Fractionator is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
