The principle of the aromatherapy candle lamp is to use the halogen bulb light source to heat and melt the aromatherapy candle. When the aromatherapy candle melts, it will emit fragrance. Therefore, the aromatherapy candle lamp is also called a wax melting lamp. Its characteristics are: 1. High safety. The candle lamp can melt the aromatherapy candle without ignition, which is safer than the traditional method of igniting and melting the candle, avoiding the potential risk of using fire. 2. Adjustable brightness, more durable candles. Traditional candles will melt faster, while candle lamps generally have a brightness adjustment function to control the melting speed, making the candles more durable. In addition, candle lamps allow the aromatherapy candles to be heated evenly, which can avoid unevenness such as dents when traditional candles are lit. 3. Diverse uses. Candle lamps not only have the main purpose of melting aromatherapy candles, but can also be used as lighting tools. In addition, most candle lamps are elegantly designed and can be used as home furnishings to increase beauty.
