The global Frame Type Hydraulic Vulcanizing Press market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The frame-type hydraulic vulcanizing machine is a hot-pressing equipment used for vulcanizing rubber products. It is mainly composed of a frame, a hot plate, a plunger, a hydraulic system, an electrical control system, etc. The characteristics of the frame-type hydraulic vulcanizing press are stable and reliable structure, large mold clamping force, uniform temperature, and easy operation. It is suitable for rubber products of various specifications, such as tires, seals, hoses, etc. The working principle of the frame-type hydraulic vulcanizing machine is to use the hydraulic system to drive the plunger to rise, pressing the hot plate and the mold tightly, so that the rubber product undergoes a vulcanization reaction under high temperature and high pressure, thereby improving the elasticity and durability of the rubber.
