Franking machines have been in use for well over a century, ever since Norwegian inventor Engle Frankmussler came up with a device to stamp out stamp thieves. His basic franking machine – using a manual crank and printing dye – automated postage stamping without the need for paper stamps. Although the principle is the same, today's franking machines are sophisticated digital devices that typically print using an inkjet system. As well as printing postage tariffs, modern franking machines often have built-in scales to accurately weigh letters and parcels prior to postage. They can also print marketing text as well as logos and other designs on mail items, making them a cost-effective form of advertising for business customers.
