This process disinfects the waste prior to final disposal.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the

expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment. Every year, avoidable healthcare infections threaten hundreds of millions of people around the world. Infection prevention in healthcare relies heavily on the sterilization and decontamination of instruments and medical devices. Improper sterilization of surgical tools and reusable equipment persists in many hospital settings, leading to major health concerns. Sterilization and decontamination operations are complex, requiring complex infrastructure and equipment, and multiple stages that need to be completed correctly, starting with equipment collection, processing, storage, and distribution throughout the facility. Risks posed by the current widespread pandemic, growing public awareness about antimicrobial resistance, and rising chronic complications are the major factors driving the need for safe and aseptic practices in hospitals and other healthcare settings. Furthermore, increasing research activities in the biopharmaceutical industry has also led to an increase in the demand for autoclaves.
