Freeze dried American ginseng powder is made through freeze-drying technology, which turns ginseng into powder while retaining its active components to the greatest extent. Its core function is to efficiently supplement nutrition, enhance immunity, combat fatigue, and improve physical functions. It solves the problems of component loss, low absorption rate, and inconvenient storage in traditional consumption methods, providing modern people with a convenient and efficient health care option. The upstream process mainly includes ginseng cultivation (soil, seedlings, agricultural inputs), harvesting and initial processing; the downstream process covers the deep processing, packaging, brand marketing of freeze-dried powder, and final sales to consumers and enterprise customers through online and offline channels (such as pharmacies, e-commerce, health institutions). The output of freeze dried American ginseng powder is approximately 800 tons in 2025, with an average price of about 700 US dollars per kilogram and a gross profit margin of about 55%. The single-line production capacity is 15 tons per year.
