A Freeze Indicator is a type of temperature-sensitive device used to monitor whether a product or shipment has been exposed to freezing temperatures during transportation or storage. It typically consists of a chemical or material that undergoes a visible change, such as a color change or formation of crystals, when the temperature drops below a certain threshold. This change serves as an indication that the product may have been compromised by freezing temperatures, potentially affecting its quality or efficacy. Freeze indicators are commonly used in industries such as pharmaceuticals, food, and electronics to help ensure the integrity of temperature-sensitive goods throughout the supply chain.
