The global Frequency Conversion Raising Machine market size is predicted to grow from US\$ 375 million in 2025 to US\$ 480 million in 2032; it is expected to grow at a CAGR of 3.6% from 2026 to 2032.

The variable frequency raising machine is a textile equipment controlled by variable frequency speed regulation technology. It is mainly used to raise the surface of textiles to increase their softness and comfort. It uses a high-speed rotating brush or other raising device to loosen and stand up the fibers on the surface of the textile to form a certain plush effect. The variable frequency control system of the variable frequency raising machine makes the equipment run more stably and the speed adjustment more flexible, so as to adapt to the processing requirements of different fabrics, improve production efficiency, and effectively save energy. It is widely used in the production process of products such as wool sweaters, blankets, and suede fabrics.
