The global Fresh Food Transport Pallet market size is predicted to grow from US\$ 667 million in 2025 to US\$ 943 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Paper pallets, or so-called eco-pallets, are shipping or display pallets made from paperboard.

The Fresh Food Transport Pallet market is being propelled by several key factors reflecting the increasing demand for efficient and hygienic transportation solutions in the food industry. With the rising importance of food safety and quality assurance, there is a growing need for pallets specifically designed to transport fresh food products while maintaining their integrity and freshness throughout the supply chain. These pallets are engineered with features such as smooth surfaces, rounded edges, and non-porous materials to prevent contamination and facilitate easy cleaning and sanitation. Additionally, as the global food supply chain becomes more complex and interconnected, there is a greater emphasis on reducing food waste and optimizing logistics operations. Fresh food transport pallets offer solutions to these challenges by providing durable and reusable platforms for efficiently transporting perishable goods, minimizing damage, and ensuring timely delivery to consumers. Moreover, with the increasing adoption of automation and robotics in food handling and distribution, the demand for pallets compatible with automated systems further drives market growth. As the food industry continues to prioritize efficiency, safety, and sustainability in its operations, the Fresh Food Transport Pallet market is expected to witness sustained expansion, offering innovative solutions to meet the evolving needs of food manufacturers, distributors, and retailers.
