Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Vegetables are parts of plants that are consumed by humans or other animals as food. The original meaning is still commonly used and is applied to plants collectively to refer to all edible plant matter, including the flowers, fruits, stems, leaves, roots, and seeds. An alternative definition of the term is applied somewhat arbitrarily, often by culinary and cultural tradition. It may exclude foods derived from some plants that are fruits, flowers, nuts, and cereal grains, but include savoury fruits such as tomatoes and courgettes, flowers such as broccoli, and seeds such as pulses.

The global Fresh Vegetables market size is projected to grow from US\$ 645750 million in 2023 to US\$ 789060 million in 2030; it is expected to grow at a CAGR of 2.9% from 2024 to 2030.

In the current e-commerce shock, the net profit of traditional retail industry in China has been declining year after year. The high-frequency and on-demand nature of the fresh food industry has a strong customer gathering ability, bringing a considerable market for offline fresh food consumption. Therefore, in the new retail era, many corporate giants, whether in traditional supermarkets or e-commerce fields, have inevitably chosen to enter the fresh food industry.

This report presents a comprehensive overview, market shares, and growth opportunities of Fresh Vegetables market by product type, application, key players and key regions and countries.
