A food preservation performance evaluation system is a comprehensive testing system used to detect and analyze quality changes and preservation effects of food (such as fruits, vegetables, and meats) during storage or transportation. This system typically evaluates the effectiveness of different preservation technologies (such as modified atmosphere storage, cold chain storage, or preservation materials) by continuously monitoring and analyzing data on gas composition (such as O₂ and CO₂), temperature and humidity, respiration rate, weight loss rate, and quality indicators such as color and firmness. It is widely used in agricultural research, food processing, and cold chain logistics, and is an important tool for optimizing preservation solutions, extending shelf life, and improving product quality. In 2025, sales reached 67,000 units, with an average price of \$655, a capacity utilization rate of 88%, and a gross profit margin of 34%.
