The global Friction Sawing Machinery market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Friction sawing machinery is machinery using a cutting wheel to quickly cut long, thin metal materials such as steel pipes and wire ropes.

Compared to disc grinders, which are similar products, friction sawing machinery has two main features: first, the cutting wheel is larger and the motor output is higher than that of a disk grinder. As a result, the cutting time is faster; second, while disk grinders are hand-held, high-speed cut-off machines are used on a tabletop and can cut a targeted area with high precision.

However, friction sawing machinery is a cutting-only machine and cannot be equipped with an abrasive wheel, as is the case with a disk grinder.

The global market for friction sawing machinery is expected to witness steady growth in the coming years. Friction sawing machinery is used in various industries such as automotive, aerospace, construction, and manufacturing for cutting and shaping metal and other materials. The increasing demand for precision cutting and shaping of materials in these industries is driving the growth of the friction sawing machinery market.

One of the key factors driving the growth of the market is the increasing adoption of automation and advanced technologies in manufacturing processes. Friction sawing machinery offers high precision cutting and shaping capabilities, which is essential for

industries that require high-quality finished products. Additionally, the growing demand for lightweight materials in the automotive and aerospace industries is also fueling the demand for friction sawing machinery.

The market is also witnessing a trend towards the development of advanced friction sawing machinery with improved efficiency and performance. Manufacturers are focusing on incorporating features such as automatic feed control, real-time monitoring, and remote operation capabilities to enhance the productivity of the machinery. This is expected to drive the adoption of friction sawing machinery in various industries.
