The front camera system is a system that integrates multiple forward-looking sensors (such as cameras and radars), and is mainly used for the realization of autonomous driving and advanced driver assistance systems (ADAS) functions. It can process data from different sensors and provide functions such as lane keeping, adaptive cruise control, and collision warning (such as forward collision warning FCW, automatic emergency braking AEB). The system is usually equipped with high-performance chips (such as Horizon's Journey 3 or Mobileye's EyeQ4, etc.), has rich scene recognition capabilities, and supports functional safety. The installation of a front camera system can quickly enhance the intelligent driving function in driving scenarios, and has become an important means for automakers to attract consumers and increase sales.
