The Front-loading laboratory autoclave is a device for efficient and reliable autoclaving in a laboratory environment. It is widely used in life science laboratories, hospitals, pharmaceutical factories and other fields. This type of autoclave usually uses the principle of a pressure vessel, using high temperature and high pressure steam to kill or remove microorganisms, bacteria, viruses and other potential sources of contamination

in the laboratory. It can thoroughly sterilize experimental instruments, culture media, cultures, media and waste to ensure the aseptic conditions of laboratory operations and the reliability of experimental results. Front-loading autoclaves feature a loading area at the front of the device, allowing users to conveniently place items to be sterilized directly in this area without opening the entire device. This design simplifies the operation process, improves work efficiency, and reduces potential contamination risks.
