The global Front-Mounted Ultrasonic Detectors market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A front ultrasonic detector is an ultrasonic sensor installed at the front of a vehicle. It uses the reflection principle of ultrasonic waves to detect obstacles in front of the vehicle. When the ultrasonic transmitter sends out an ultrasonic signal, it is reflected back after encountering an obstacle and received by the receiver. By calculating the time difference between the emission and reflection of the ultrasonic wave, the distance and position of the obstacle can be determined. This detector is usually used in the vehicle's assisted parking system to help the driver avoid collisions when reversing or parking.
