Froth flotation is a process for selectively separating hydrophobic materials from hydrophilic. This is used in mineral processing, paper recycling and waste-water treatment industries.

The mining industry is the largest end user of froth flotation chemicals. The chemicals are used in mining activities, according to the nature of the mine explored in the area. Froth flotation chemicals help in the extraction of minerals, by allowing them to attach to air bubbles. Collectors are the major froth flotation chemicals that boost the wettability characteristics of the required minerals, for the adsorption of molecules on the mineral surface, reduction of the mixture's stability, and separation of minerals.
