Frozen food labels are labels specially designed for products in low temperature environments. Frozen products are much cooler than most other products and foods. This means labels need to be designed for freezing conditions without compromising appearance and performance. Freeze-grade labels are made from special materials and an adhesive that remains strong in freezing conditions. Typical label adhesives are not designed for low temperatures and may crack and peel when exposed to freezing temperatures. Most adhesives will start to set and crystallize around 40-50°F, which means that once deep freeze is reached, the labels will peel off your product. Frozen food labels are designed to work in cold conditions, typically down to around -20°F to

-30°F, ensuring that the labels will not peel off during shipping or after prolonged exposure to freezing temperatures. Frozen food labels are printed labels glued to a can or box of frozen goods for easy identification. The labels provide vital information about the goods and their lifespan. In addition, they state the price and shelf life. The frozen food labels are used in various industries such as food sector, medical sector, logistics, research and pharmaceuticals. Deep-freeze labels are weatherproof down to -30 degrees Celsius – even with a light frost layer.
