Abstracts

The global Frozen Papaya market size is predicted to grow from US$ 215 million in 2025 to US$ 305 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Frozen Papaya refers to papaya fruit that has been peeled, deseeded, cut and frozen through industrial freezing processes. The product is typically available in the form of cubes, slices, strips or larger blocks, with multiple size options and color grades to meet different downstream requirements. The freezing process rapidly stabilizes the fruit’s texture, flavor and nutritional components, enabling consistent quality during long distance transportation, storage and industrial processing. Compared with fresh papaya, frozen papaya offers year round availability, low waste, high standardization and strong handling stability, making it a widely used ingredient in beverages, smoothies, bakery items, frozen blends, foodservice operations and large scale food manufacturing.

Unlike IQF individually frozen products, conventional frozen papaya may be produced in block frozen, slab frozen or molded formats, making it more suitable for applications where piece separation is not required, such as pur?es, jams, fillings and heat processed food products. Major producing regions include Thailand, Vietnam, the Philippines, Mexico and Brazil, which benefit from well developed tropical fruit supply chains and established processing capabilities that support global export demand.

Based on industry databases, export data from major tropical fruit producing countries and verified interviews with processors, global frozen papaya production in 2024 is estimated at 0.18–0.28 million tons, influenced by raw material seasonality and varying processing structures. The weighted average FOB price generally ranges from USD 800 to 1,200 per ton.
