According to our LPI (LP Information) latest study, the global Frozen Tissues Samples market size was valued at US\$ 50 million in 2023. With growing demand in downstream market, the Frozen Tissues Samples is forecast to a readjusted size of US\$ 149.8 million by 2030 with a CAGR of 17.0% during review period.

The research report highlights the growth potential of the global Frozen Tissues Samples market. Frozen Tissues Samples are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Frozen Tissues Samples. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Frozen Tissues Samples market.

Frozen tissues, on the other hand, work very well for molecular genetic analysis – especially if the biopsy materials are dipped in liquid nitrogen in a method called “flash freezing,” and then stored in an ultra-cold freezer at less than -80 degrees Celsius. Thus, if you have a “-80” freezer and liquid nitrogen, fresh frozen tissues are easy to prepare. Frozen tissue array samples are also very useful for IHC analysis, since proteins are preserved in a native state.

Global major companies profiled in the Frozen Tissues Samples market include Precision for Medicine, ProteoGenex, Bay BioSciences, Zen-Bio, OriGene Technologies, etc. Global top five companies account for nearly 25% of market share.

North America is the largest market and accounts for over 45 percent. Besides, Europe and Asia-Pacific are likely to offer good prospects, have a share about 25% and 20% respectively.

In terms of product, Frozen Tumor Tissue Samples is the largest segment, with a share over 65%. And based on application, the largest application is Cancer Research, followed by Disease Diagnosis and so on.
