FRP pultrusion equipment is an automated equipment specially used for the continuous production of glass fiber reinforced plastic (FRP) profiles. It continuously pultrudes and solidifies glass fiber raw materials impregnated with resin under certain temperature and pressure conditions through a heated mold. The equipment is usually composed of a fiber traction system, an impregnation tank, a preforming device, a heating mold, a traction mechanism and a fixed-length cutting system. It has the characteristics of high production efficiency, precise profile size, and stable product performance. It is widely used in the production of composite materials such as cable trays, insulating rods, guardrails, profile beams, and building structural parts. It is one of the core equipment for the industrialized and standardized manufacturing of FRP products.
