The global Fruit Extract Puree market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Fruit extract puree refers to a product made by processing fresh fruits to create a smooth, concentrated mixture with a rich flavor and texture. The process typically involves crushing, grinding, or blending the fruit, followed by the removal of seeds, skins, and other undesirable components. The result is a thick and pulpy substance known as fruit puree. If the puree undergoes further processing to remove water content and concentrate flavors, it may be termed as fruit extract puree.

There is a growing consumer demand for clean label products, including fruit extracts and purees. Clean label trends emphasize natural and minimally processed ingredients, without artificial additives, preservatives, or sweeteners.
