The fruit and vegetable respiration rate meter is a specialized testing device used to measure the respiration intensity and rate of fruits and vegetables during storage, transportation, and preservation. It assesses the maturity, metabolic activity, and shelf life of fruits and vegetables by monitoring changes in gases released or consumed (such as CO₂ and O₂), thus providing a scientific basis for cold chain management, post-harvest processing, packaging technology, and storage strategies. This equipment is widely used in food research institutions, preservation technology companies, fruit and vegetable processing enterprises, and agricultural colleges, and is an important tool for improving fruit and vegetable quality management and extending shelf life. In 2025, sales reached 67,000 units, with an average price of \$655, a capacity utilization rate of 88%, and a gross profit margin of 34%.
