Foods for special medical purposes (FSMP) are a sub-category of foods intended for particular nutritional uses (PARNUT), also called “dietetic foods.” FSMPs are intended for the dietary management of diseases in patients with impaired digestive function such as absorption, making them the most medically-oriented food category. Preterm birth (born before 37 weeks of pregnancy) and being small for gestational age, which are the reasons for low-birth-weight (LBW), are also important indirect causes of neonatal deaths. LBW contributes to 60% to 80% of all neonatal deaths. The global prevalence of LBW is 15.5%, which amounts to about 20 million LBW infants born each year, 96.5% of them in developing countries. In this report, we study the food for special medical purposes for the dietary management of preterm infants/Low weight infants.
