The global FSO Transmission System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The FSO transmission system refers to the Free Space Optics transmission system. It uses light waves to transmit data in free space without the need for traditional wired fiber optic networks.

The FSO transmission system provides a rate similar to that of optical fiber transmission, but compared with optical fiber lines, it has the characteristics of low cost, simple construction, high-speed transmission, and good security. In practical applications, these factors need to be comprehensively considered and corresponding deployment and configuration made.
