FTTx network solution refers to a network system built with FTTx technology, which uses optical fiber as the main transmission medium to bring high-speed Internet connections to end users. FTTx is a network architecture where 'x' represents a letter, which represents the location where the fiber connection terminates, which can be at the user's home, building, street, specific area or office.

The key components of FTTx network solution include:

1. Fiber infrastructure: This includes the fiber optic cables laid to the user's location, which can provide extremely high data transmission rates.

2. Optoelectronic devices: These devices are used to convert optical signals into electrical signals, or vice versa, in order to transmit or receive data in the fiber optic network.

3. Network management system: This is a software system used to monitor and manage the operation of the network to ensure the stability and security of data transmission.

4. Terminal equipment: This usually refers to the modem or router in the user's home, which is used to distribute network connections to various devices in the home.

The purpose of FTTx network solution is to provide faster and more reliable Internet access services than traditional copper wire networks. As technology develops and
