FTTx is the abbreviation of 'Fiber To The x', where x represents not only the location where the optical fiber reaches, but also the optical network equipment installed at that location, and specifies the area served by the network equipment. For example, the 'H' in FTTH is the abbreviation of Home, which means fiber to the home. The fiber optic cable is laid to the user's home, and an optical modem is installed at the user's home. The area served by the optical modem is 1 home.

The key advantage of FTTx solutions is that they provide high-bandwidth and low-latency connections, which are essential to support modern communication needs. With the growth of data transmission needs and the advancement of network technology, FTTx solutions are gradually replacing traditional copper wire networks and becoming the mainstream technology for providing high-speed Internet access.
