The global Fuel Cell Electric Air Compressors market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Fuel-cell air compressors in electric vehicle propulsion systems are responsible for forcing air into the fuel cell stack, where it is used as an oxidant to produce a reaction with hydrogen ions and electrons at the fuel cell cathode to form water. Air compressor systems are important for controlling air mass flow rate and air pressure.

According to data released by the China Association of Automobile Manufacturers, in December 2022, the production and sales of hydrogen fuel cell vehicles in China was 653 and 607, respectively. In the whole year of 2022, the production and sales of hydrogen fuel cell vehicles was 3,626 and 3,367, a year-on-year increase of 105.4% and 112.8%, respectively. According to our Fuel Cell Research Center, by the end of 2022, the number of fuel cell vehicles in the world had reached 67,000 units, a year-on-year increase of 36.6%. Among them, the number of fuel cell vehicles in China was 12,682 units.

The market for fuel cell electric air compressors is experiencing rapid growth, particularly in industries and transportation sectors facing environmental pressures and sustainability demands. The market size is expanding year by year, with increasing sales of this technology catering to specific uses such as providing clean energy-driven air compression solutions for hydrogen storage, fuel cell vehicles, and energy systems. The future development prospects are promising, as the technology matures and

investments in sustainable energy from both governments and industries increase, fuel cell electric air compressors are poised for further breakthroughs in broader application areas.
