A fuel cell refrigerated truck is a type of transport vehicle that uses fuel cell technology to power its refrigeration unit, ensuring temperature-sensitive goods are kept cool during transit. Fuel cells generate electricity through a chemical reaction between hydrogen and oxygen, producing only water and heat as byproducts, making them an environmentally friendly alternative to traditional diesel-powered refrigeration systems. These trucks offer several advantages, including reduced greenhouse gas emissions, lower noise levels, and increased energy efficiency. They are particularly beneficial for urban deliveries and long-haul transportation where maintaining a consistent temperature is crucial for perishable goods such as food, pharmaceuticals, and other sensitive products.

The global Fuel Cell Refrigerated Truck market size is projected to grow from US\$ 14.8 million in 2024 to US\$ 159 million in 2030; it is expected to grow at a CAGR of 48.5% from 2024 to 2030.
