The global Fuel Cell Stack Test Stations market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Fuel cell stack test stations are specialized setups used to evaluate the performance, durability, and characteristics of fuel cell stacks. These stations assess the electrical performance of the fuel cell stack under various operating conditions, including different temperatures, pressures, and flow rates of fuel and oxidant. They measure parameters like voltage, current, power output, and efficiency.

News articles report that companies like Nissan are exploring SOFC technology for powering electric vehicle production facilities. SOFCs boast higher efficiency than traditional fuel cells, making them attractive for industrial applications requiring high power generation.
