Fixed-wing unmanned aerial vehicle, a heavier-than-air unmanned aerial vehicle flying in the atmosphere. Fixed wing unmanned aerial vehicle, a type of unmanned aerial vehicle in which the wing's sweep angle can be adjusted automatically or manually with the speed. Because of its excellent functions and modular integration, it has been widely used in surveying and mapping, geology, petroleum, agriculture and forestry and other occupations, and has a broad market application prospect. The general fixed-wing UAV system consists of five main parts: airframe structure, avionics system, power system, take-off and landing system and ground control station.

Fuel-Driven Fixed Wing Unmanned Aerial Vehicles (UAVs) are a type of unmanned aircraft that are powered by fuel, typically utilizing internal combustion engines or turbine engines. These UAVs have a fixed-wing structure and are capable of sustained and extended flight. They find applications in various fields for a wide range of missions and tasks. Fuel-driven fixed-wing UAVs can carry a larger fuel load, allowing them to achieve longer flight durations compared to battery-powered UAVs. This makes them suitable for missions that require extended airborne time. The use of fuel engines enables these UAVs to achieve higher speeds and cover longer distances, making them suitable for missions that require rapid response or wide area coverage. These UAVs have the capability to carry larger payloads, such as cameras, sensors, communication equipment, and more. This makes them versatile for various data collection and surveillance tasks.
