Fuel fireplace is a fireplace that operates with burning gas or solid fuel. Gas and solid fuel (wood) fireplaces have a variety of ventilation options, including direct ventilation, natural ventilation and no ventilation. Gas and solid fuel (wood) fireplaces must be selected that are suitable for the local climatic conditions and the type and age of the building. More and more interior designers and architects are using gas and solid fuel (wood) fireplaces as the focus of their design. Due to its decorative value, gas and solid fuel (wood) fireplaces are usually installed in the early stage of construction. In addition, these fireplaces do not rely on electricity or any other power supply, so consumers can keep their houses warm even if there is a power failure.
