## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The fuel pump strainer (also known as a pre-filter or fuel sock) is a fuel system's first line of defense against contamination from dirt, dust, or other fine particles found in regular pump gasoline. Gasoline has a tendency to varnish over time, leaving a thick filmy layer over everything inside the tank. A varnished or clogged strainer restricts flow, forcing the fuel pump to work harder which can lead to premature failure. Within powersports applications fuel strainers need to be replaced more regularly as they sit longer in the tank between uses.
