Fuel tank sealant is an important adhesive that seals the interior of the tank by sealing rivets and joints. They help limit fuel leakage from the tank and prevent rust and corrosion of the mailbox. They perform well when in contact with steel, aluminum and titanium. Sealants have a rubber-like flexible form that helps maintain their performance over the optimal temperature range up to 250 ° F. Fuel tank sealants are used in a variety of applications due to their resistance to oil and other fuels.
