A fuel is any material that can be made to react with other substances so that it releases energy as heat energy or to be used for work.

The gasoline segment will continue to dominate the fuel market. Gasoline is the chief product refined from crude oil and one of the primary fuel consumed. It is mostly used in light sport vehicles, especially sport utility vehicles, cars, and small trucks, boats, small aircraft, farm, construction, and landscaping equipment. With the declining prices of crude oil, the demand for gasoline is expected to grow over the next few years.
