The global Full Automatic Condensation Point Pour Point Tester market size is predicted to grow from US\$ 179 million in 2025 to US\$ 245 million in 2032; it is expected to grow at a CAGR of 4.6% from 2026 to 2032.

The fully automatic pour point and cloud point tester is an automated analytical instrument used to accurately determine the pour point and cloud point of petroleum products (such as lubricating oil and transformer oil). Through microelectronic control, refrigeration, and tilting technology, it achieves fully automatic cooling, detection, and recording throughout the entire process. The upstream supply chain mainly includes high-precision sensors, semiconductor cooling components, and photoelectric liquid level detection components. Downstream applications are widespread in power, petrochemical, and scientific research fields. In 2025, global sales are projected to be approximately 10,000 units, with a market price of \$13,000 to \$70,000 per unit. The industry's gross profit margin is in the range of 25%-40%.

The downstream industries' continuous pursuit of quality, safety, and efficiency, particularly in the petrochemical and power sectors, with their strict oil product specifications and emphasis on production safety and equipment protection, creates a stable demand for equipment upgrades and new equipment. Technological advancements, such as more efficient miniature cascade refrigeration technology, have enabled the miniaturization of instruments, allowing them to move from laboratories to field locations such as oil wellheads. The integration of artificial intelligence and the

Internet of Things has given instruments data prediction and remote management capabilities, greatly expanding their value proposition.
