The Fully Automated IC Test Tape and Reel Machine is a highly automated piece of equipment used in the back-end processes of semiconductor packaging and testing. It can complete electrical performance testing, appearance inspection, sorting, and tape-and-reel packaging of electronic components or IC products, achieving high-speed production and stable quality control through machine vision and automated handling systems. This equipment is typically used in the testing and tape-and-reel packaging processes of IC chips, inductors, filters, and other components, achieving production speeds of tens of thousands of devices per hour, thus significantly improving production efficiency. In 2025, global sales of fully automated high-speed test tape and reel machines are estimated at approximately 5,200 units, with an average unit price of approximately US\$235,000 and a capacity utilization rate of approximately 84%. Upstream companies primarily come from the fields of precision machining, industrial automation control, machine vision systems, semiconductor testing instruments, and high-end motion control components. Downstream companies mainly come from semiconductor packaging and testing companies, IDM semiconductor manufacturers, power device manufacturers, electronic component manufacturers, and the consumer electronics chip supply chain. The industry's gross profit margin is approximately 34%. The product cost structure is primarily composed of: test systems and core electronic modules accounting for approximately 39%; precision mechanical structures and motion control systems accounting for approximately 23%; vision inspection and software systems accounting for approximately 14%; and assembly, manufacturing, and debugging costs accounting for approximately 12%. Channel and after-sales service

costs account for approximately 12%. On the demand side, the downstream demand list includes memory chip packaging and testing, analog chip testing and packaging, power device packaging and testing, LED and passive component packaging, and mass production testing of consumer electronics chips. The downstream customer list includes OSAT packaging and testing manufacturers, semiconductor IDM companies, chip design companies, electronic component manufacturers, and large electronic manufacturing service companies. In terms of business opportunities, policy drivers mainly come from semiconductor industry support policies, advanced manufacturing upgrades, and the trend of domestic equipment substitution. Technological innovation drivers come from high-speed vision inspection technology, intelligent automatic testing systems, and high-precision automated assembly technology. In terms of changing consumer demands, the demand for chip reliability, production efficiency, and high-quality packaging capabilities in terminal electronic products continues to grow.
