Full Contact Internal Floating Roof is a floating roof which floats on the liquid level of the oil tank and rises and falls with the oil. It is the most economical and simple way to reduce the evaporation loss of oil products to cover the liquid surface with this kind of inner floating roof. Under specific circumstances, the data statistics of relevant manufacturers show that the economic value of reducing oil and gas volatilization within 3-6 months is equivalent to the installation and procurement cost of internal floating roof, that is, the internal floating roof cost can be recovered within half a year. It is suitable for all sizes of butt tanks and lap tanks. It does not pollute oil or chemicals, can reduce the volatilization loss of medium and prevent air pollution. It is an ideal inner floating roof (tray). It has the characteristics of low cost, short construction period, corrosion resistance, no volume and long service life.
