The full-containment tank is a double-containment tank, with the annular gap between the outer tank and the inner tank being sealed. The typical features of a full-containment tank are a primary liquid containment open-top inner tank and a concrete outer tank. The outer tank provides primary vapor sealing and secondary liquid sealing. If a leak occurs, the outer tank contains the liquid and provides a controlled release of vapor.

The global Full Containment Storage Tank market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
