Full Dull Polyester Chip refers to a type of polyester material that has been specially treated to achieve a dull or matte appearance. Polyester Chips, also known as Polyethylene Terephthalate (PET) Chips, are the raw materials used in the production of polyester-based products. Full Dull Polyester Chips undergo a chemical process that alters the surface of the chips, reducing the reflectivity of light and giving them a muted or non-shiny finish. This treatment is achieved through various methods such as pigmenting, matte additives, or physical treatments like heat rolling. Full Dull Polyester Chips find applications in textiles where a less shiny or more subtle appearance is desired, such as clothing, upholstery, and home furnishings.

The global Full Dull Polyester Chip market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
