The global Full Frame CIS market size is predicted to grow from US\$ 754 million in 2025 to US\$ 1339 million in 2032; it is expected to grow at a CAGR of 8.9% from 2026 to 2032.

In 2025, global production of full-frame CIS reached 2.41 million units, with an estimated average selling price of \$320 per unit. Full-frame CIS refers to a CMOS image sensor with an imaging area close to that of traditional 35mm film, a typical size of approximately 36mm × 24mm, and a diagonal of approximately 43.3mm. It differs from the small-sized CIS commonly found in mobile phones, automobiles, and security systems, and is used in full-frame mirrorless/SLR cameras, digital cinema cameras, industrial machinery, astronomical/scientific cameras, medical/microscopic imaging, surveying/aerospace, and other fields. The upstream segment includes high-purity silicon wafers, CIS wafer foundry/own wafer fabs, photoresists, color filters, microlenses, metal interconnects, packaging substrates, glass covers, testing equipment, image processing IP, and EDA tools; the midstream segment includes sensor design, wafer manufacturing/foundry, packaging and testing, and imaging solutions; the downstream segment primarily serves camera and scientific imaging equipment manufacturers, as well as industrial vision, medical, scientific research, and aerospace customers. Gross profit margin is approximately 30%-50%.

From a global production perspective, Japan serves as the core manufacturing hub; Europe possesses a supply chain for large-format sensors geared toward industrial and scientific research; and China's supply chain focuses primarily on packaging and testing, modules, and scientific-grade cameras. On the consumption side, the Asia-Pacific region is supported by camera supply chains and industrial vision demands across Japan, China, and South Korea; North America is driven by demand in high-end imaging, scientific research, aerospace, healthcare, and machine vision; and Europe's market is dominated by industrial inspection, scientific research, automotive/high-end

manufacturing, and professional imaging. Looking ahead, full-frame CIS technology will continue to evolve toward higher resolutions, back-illuminated and stacked architectures, high-speed readout, low noise, high dynamic range, global shutter capabilities, AI computational photography integration, 8K/12K video support, and scientific-grade performance?specifically low dark current and stability during long exposures.
