## Abstracts

The global Full-frame Oblique Cameras market size is predicted to grow from US$ 410 million in 2025 to US$ 685 million in 2031; it is expected to grow at a CAGR of 8.9% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Full-frame oblique cameras combine the high resolution and wide viewing angle of full-frame cameras with tilt and shift functions to effectively control the perspective distortion and depth of field of the image. The tilt function is used to adjust the focal plane direction to achieve selective focus or expand the depth of field, while the shift function is used to correct the distortion of vertical lines of buildings or perform high-precision stitching imaging. Due to the large sensor size, the image quality is better than APS-C or medium format crop sensor systems.
