Full-hydraulic core drilling machine is a kind of drill that uses hydraulic power to operate the core drilling mechanism. In mining, geotechnical engineering, environmental sampling and mineral exploration, this type of drill is usually used to drill core samples of rock, soil or other geological structures. One of the advantages of full hydraulic core drills is that they can provide a high level of accuracy and control, which is very important for accurately drilling core samples. The hydraulic system allows precise control of drilling speed, pressure and torque, which helps to prevent bit damage and

improve drilling efficiency.
