The fully mechanical combination lock is a security device that realizes combination locking and unlocking based on a mechanical structure. Unlike electronic combination locks, fully mechanical combination locks do not require a power supply or batteries and rely entirely on mechanical components for operation. The user unlocks the lock by inputting a preset password, thereby realizing unlocking. This type of combination lock is usually made of durable metal and alloy materials, which has high security and stability. With the development of science and technology, some fully mechanical combination locks may incorporate some intelligent elements, such as fingerprint recognition, voiceprint recognition, etc., to improve security and convenience.
