The global Full Premix Gas Burner market size is predicted to grow from US\$ 144 million in 2025 to US\$ 210 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

In 2025, global production of full premix gas burners reached 240,000 units, with an average selling price of \$615 per unit. A full premix gas burner is a combustion solution in which fuel gas and air are thoroughly mixed in a predetermined ratio prior to combustion, and subsequently delivered into the combustion zone via an integrated assembly comprising a blower, gas valve, and burner head to complete the combustion process. Its core advantages lie in more precise air-fuel ratio control, greater flame stability, a wider modulation range, and lower NO_x and CO emissions. Applications span residential and commercial condensing boilers, wall-mounted boilers, commercial water heaters, and modular boiler systems. The upstream segment primarily involves stainless steel sheets and deep-drawn components, metal fiber/wire mesh, blowers/brushless motors, proportional gas valves, igniters, flame detectors, controllers, seals, housings, and heat exchanger accessories. The midstream segment encompasses burner head design, gas mixing system integration, control algorithm development, complete unit assembly, and certification testing. The downstream segment connects to condensing boilers, water heaters, commercial heating equipment, drying equipment, industrial heating systems, and HVAC thermal systems. Gross margins range from approximately 15% to 30%.
