The global Full Rotary Drilling Rig market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Azimuth drilling rig is a kind of equipment used in oil and gas exploration, mainly for drilling deep wells. The full-rotary drilling rig can realize the full-range rotation of the drill pipe and the drill bit, so that it can flexibly respond to various situations during the drilling process. A full-rotary drilling rig is usually composed of a drilling tower, a drilling machine, a drill pipe, a drill bit, a drilling fluid circulation system, and a control system. When drilling with an azimuth drilling rig, it is first necessary to send the drill pipe and drill bit into the wellhead, and then control the movement of the drill pipe and drill bit through the control system to make them rotate and drill down into the ground. The drilling fluid circulation system can pump drilling fluid from the wellhead into the well, scour the rock formation and bring cuttings back to the surface, thus maintaining the stability and cleanliness of the drilling.

United States market for Full Rotary Drilling Rig is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
